To Our Customers:

form on

line-order

As we operate differently from most ordinary nursery companies, we think you may be interested in knowing our method.

Like most nurseries today, local or mail-order, most of our stock is grown for us by wholesale growers. Unlike most other nurseries, we do not first have it shipped to a central shipping and storing plant, or set out in a local display nursery—we have it shipped direct from the grower to you. This is considered "old-fashioned" and it does have its difficulties. For example, weather sometimes interferes with desired shipping dates; also sometimes several shipments must be made instead of one, as wholesale growers usually specialize in a few kinds only.

The advantages, however, we think outweigh the difficulties. (1) The stock, most of it dug specially for your order, shipped at once, is fresher and more vigorous; (2) Costs are lower, since only one shipment has to be made, and no storage; (3) Many more rare kinds can be offered (Ordinary nurseries stock only kinds where a large mass sales can be expected.)

You deal only with us and we are an entirely responsible source of supply. We ask confidently for your orders; we try hard to furnish good stock, and to be more than fair if anything goes wrong—which is seldom. Our liberal guarantee is given on the next page.

Kelsey Nursery Service

P. S. This small autumn price-list covers less than half the kinds we have available. Write us for prices on anything you don't see—our large spring catalog will be mailed you next February.

HOW TO ORDER

Fill in the order form and enclose check. Shipment is made with express charges collected on arrival. You will get a prompt acknowledgment of order indicating approximate shipping time.

OUR GUARANTEE

We will allow a credit of 50% of the catalog value of any stock that dies the first year. Credit to be used on future orders as you wish.

ORDER NOW — DON'T WAIT

Unlike other things you buy, nursery stock must be ordered in advance—long before the right shipping time. Why? Because our whole year's shipments come in a few months' time and there is never enough help. Shipments are scheduled long in advance. Order now, we will ship at proper time later.

TERMS OF SALE

PACKING COSTS—Free if cash accompanies order, except stock dug with a ball or earth. Otherwise, packing is charged at cost (usually 10% of cost of stock). Balled, heavy evergreens: we will estimate costs in advance if you wish.

LIMITED RESPONSIBILITY—We disclaim responsibility for any reason in amounts greater than invoiced.

PRICES—Net at the nursery. Transportation to be added at actual cost. Usually 5 sold at rate per 10, 50 at 100 rate.

CLAIMS for errors, shortages or other causes must be made within 10 days.

PARCEL POST—Must be prepaid. We prefer express but will send by post if instructed and if you enclose 10% to cover costs and time.

EXPRESS charges are extra (except in a few prepaid Special Offers). They are paid by you to the Expressman. We will estimate these costs if you like, on your order completely delivered.

IS IT HARDY IN YOUR GARDEN?

There is a northern limit for every plant, beyond which it cannot live. For practical use the map at the left divides the country into Zones. Each plant description in this Guide has a related Zone limit. Look up your garden on the map and you can select hardy material.

BETTER GARDENING

by Laurence Manning

Thousands of gardeners have found this basic book of "more real help than a shelf of cyclopedias." "Very helpful," "exciting as a novel," "certainly no other book exists like it," "unlocks the doors and makes everything simple and understandable." If you have been confused by the complex rules and instructions in ordinary garden books, you will find here quick, sure enlightenment. Yet expert gardeners, even more than beginners, are writing about this book's surprising usefulness.

Don't deny yourself this small purchase— "pays for itself ten times over."

ORDER THESE NATURAL FERTILIZERS:

50-lb. Bags **Mulchnur**, **each** \$2.50 Contains peat-moss, manure, and enough tobacco dust to discourage cutworms, moles, etc. Fertilizing value is high. Clean, dry, shredded, ready to use. Lawns: Use 1 pound to 10 square feet. Beds, etc.: 1 pound to 2½ square feet.

50-lb. Bags **Hyper-Humus**, **each** \$2.00 Peat, screened and bagged, full or soil bacteria. Fine for Rhododendrons, though only slightly acid.

and Care for Native ARISTOCRATS

Rhododendrons low as 371/2c. few years, with little care, will be bushy \$10 specimens.

The five flowering evergreen shrubs on these two pages are shipped from the mountains of North Carolina. They are dug from natural growth in the open (not in woods) hence will succeed in normal garden conditions. Plant late Aug. to late Oct. safely. Soak heavily after planting Mulch heavily with

SIZE 2: As Small as Looks Shapely. 12 to 15 in. B&B. Clumps, 4 to 6 Stems.

These "Junior Specimens" weigh about 5 pounds per plant, individually burlapped. They are 2 years older than Size 1. Express runs about 25 cents per plant. You can expect some blooms the year after planting. These really "look like something" the day they are planted.

SIZE 3: Bushy, Heavy Clumps. 11/2 to 2 Feet, B&B.

Most are budded for at least some immediate bloom. Large enough to use at once for foundations, shrub borders. Allow about 3-ft. space, which they will fill within next few years. \$4.50 each, singly.

Any five of the 5 kinds pictured below for \$16.75. (Express costs about \$5.00 for the 5.)

SIZE 1: AS SMALL AS CAN BE SHIPPED SAFELY. 12 inch seedlings (1 stem) with a small ball.

This special "Young Aristocrat" grade measured 12 to 15 inches dug with a little earth left on roots, but not burlapped. Plants weigh one or two pounds only. This stock is not to be compared for a minute with ordinary collected plants. It is on the contrary all carefully dug, the greatest pains being taken to preserve the roots. Carefully packed, it is easily planted and makes a quick start. Shipped from North Caroina, express runs only about 8c each (in 100 lots).

VINCA (The Myrtle)

. . . plants that cover the ground where grass will not thrive . . .

Eventually one plant will cover a large area, but on banks it is important to get the soil held quickly. We suggest bad steeps be planted 12 inches apart each way—gentler slopes 1½ feet, except as noted on descriptions.

A-Seedlings or Rooted Cuttings

Must be shaded first two years. Planted 2" x 2", lath-house holds 432. After two years, must be transplanted into next grade

B—Once Transplanted Grade

Grown as above, or bought. (Our 2 yr. and 3 yr. Azaleas, e.g.) Space about 5" x 5" (80 in the lath-house pictured). Shaded first year, but the second year shade omitted except in drought. In 2 years, now twice transplanted ("XX"), usuable as hedge plants, for bedding, etc.

C-Twice Transplanted Grade

Can be moved into open, spaced 9" x 9" (nursery pictured holds 104) and left two years. They are "shaped"; straggly branches lopped off with sharp knife. Cultivate, fertilize, water, no shade needed. After 2 years, they are XXX (three times transplanted), bushy and shapely.

D—Specimens

Every garden needs some larger, well formed plants. Such specimens are grown 2 or more years spaced 18" x 18" (nursery pictured holds 32).

HERE ARE THE BEST LIVING

Many plants can be made into hedges, including the much advertised Rosa multiflora, Privets and barberry (all priced on page 9) but Hemlock and Yew are far the best of all. The XX sizes of hemlock can be put in hedge row—smaller should be bedded two years first.

FENCES (below) 12-15 inch Hemlock newly planted, and (left) how it looks 8 years later.

ROSA MULTIFLORA "FENCE"

No repairs, no maintenance problems, it just grows. No animals can get through, yet birds and small game can use it for refuge. It does not get out of hand, kept 5 feet high, width 8 feet. (Not for small gardens.)

Plant a single row, 1 foot apart. Cut back roots to 8 inches, tops to 3 or 4 inches on planting. Mulching is very beneficial—leaves, hay, sawdust, or whatever you have. Effective in three or four years, mature in seven.

HEMLOCK HEDGE

Tsuga Canadensis (Northern Hemlock). 60 ft. Zone III. In forests, a majestic patriarch,but readily sheared to hedge or modest specimen sizes. Humus. Stands shade. The most beautiful native evergreen.

Hemlock Hedge when properly sheared gives a fine, even, smooth dark green surface unlike any other hedge. Thrives in soils ranging from ordinary to damp, and from full sun to full shade, hence is easy to grow. Set plants 1½ feet apart.

PLANTING BABIES

PLANTING — The first thing is to keep the package moist. Only when the planting bed is ready do you open it, and even then remove only one plant at a time from its wrapping to plant it. This is particularly important with evergreens, but good sense with all plants. The quicker the better — twenty seconds per plant is average.

SOIL should be loose and friable, and absolutely must contain some humus. Add peat moss if necessary.

SHADE must be provided for a newly planted young evergreen. Usually only for the first summer, but very young ones need it for two summers. Deciduous trees, shrubs and vines need none.

WATER is usually critical the first week or two. Soak thoroughly when planting. Then again the next day. After that do not water oftener than once a week. But you can spray the leaves a few seconds at a time if the weather turns warm.

RHODODENDRONS

Evergreen shrubs with fine foliage. Range from dwarfs to giants. Bloom from May to July. Acid, humus, damp, loose.

- 1. The roots feed at the surface do not hoe or rake. Plant them properly and thereafter water and mulch as needed.
- **2.** Light shade, airy and open, gives best results. Only certain trees will do. The best are Oaks, Cherries, Magnolias and Birch. Their leaves make the best mulch. Avoid Beech and Maple.
 - 3. Safe planting in Sept. and Oct.

- Burlington. Good shipper. Large. Later than all others.
- → Weymouth. Earliest of all. Dark berries, best used for cooking.

Set the plants in beds 4 feet apart each way. Several varieties should be included in every planting, as an exchange of pollen is necessary to produce good crops of berries. Or order "mixed" if you wish—we will assort for good pollenization. All varieties are almost equally fine.

Blueberries require an acid soil containing peat or other rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Amazing loads of fruit on Dwarf Tree.

Dwarf Fruits

A tree whose fruit is as large or larger than ordinary, but which never grows very tall—perhaps ultimately 12 to 15 feet. Space 12 feet apart.

A dwarfed tree can be sprayed, pruned and picked by hand without ladders, equipment or professional skill. It bears much earlier in life, in its third or fourth year at latest—often earlier—and carries amazing loads of fruit. Dwarfed fruits (especially Plums and Peach) are less liable to borers and other pests.

PRICES: All kinds listed below:

1	year—Not branched\$2.60	Add 50¢
2	year—Branched 3.90	packing on orders
3	year—Heavier 5.25	

All three ages are about the same height. Most are 3 to 4 feet high, but apples often are still dwarfer. If extra dwarf apples wanted, specify Malling 9.

Many fruits do not bear good crops if planted separately. Pollen from nearby trees of different variety is often needed. Noted on these pages by:

self-unfruitful. Do not plant by itself, but always with another variety of the same fruit.

(P)—good pollenizer.

Dwarfed Espaliers Fruits

Four-Arm 5-6 ft. (heavy) (4 feet wide) Apples Pears Plums \$16.75 each

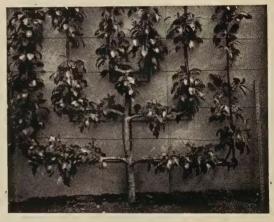

Fan-Shaped (8 feet wide) Plums Peaches Nectarines Apricots \$16.75 each

Ten to twelve feet is the maximum height to which true dwarf Espaliers will grow. ittle pruning is needed—beyond keeping the small new spurs from reaching more than six inches outside of the main stems. When a spur has borne it will continue to bear. Pick the stem with the fruit.

Peaches are an exception: fruit grows only on last season's wood. Keep two spurs coming at every four inchinterval along the stem. n March, prune one back and let the other fruit. Then, when fruited, cut it back and from the other by then there should be two new ones for the following year's crop.

Watering and fertilizing are unnecessary except in very poor soil indeed. Spray for disease as with any fruit

In planting against a wall, place the tree six inches awaa and allow 18 incses root space—requiring a space in all two feet out from the wall.

Grape Culture calls for plenty of humus in the soil. Old manure is far the best form, to produce vigorous spring growth. Extra moisture is needed as fruits fatten

Hybrid Grapes

High quality grapes on far less vigorous (and less troublesome) vines.

No permanent canes needed; only a short trunk or shank. Grapes grow on new wood, which is pruned away each year.

Most kinds bear about Concord time. Bacco, Florence, Angele are perhaps two weeks earlier. Siebel 14 and Jacques Wolf, a week later.

North American grape vines yield an unpleasant foxy flavor, tough skin, coarse seeds, and other inferior quali-ties that make them undesirable either as table or wine grapes.

The European Grape (Vitis vinifera) is far superior to our native grapes. However, it has not the stamina to withstand sub-zero weather and succumbs disastrously to diseases, while our hardy native grapes remain immune.

Breeders have produced varieties that combine the best qualities of both species to produce the ideal grape vine: namely, resiliency to our cold climate and diseases; absence of all foxiness, as with the old Concord. These Hybrid Grapes possess a pleasant sweetness and a certain native fruitiness, that makes them in many respects far superior to the California as either fine table or excellent wine grapes.

They lend themselves to Spur pruning. This quality simplifies the pruning and care of the vines and permits one to easily train them into permanent pleasing patterns. They can be grown even on a six foot pole, to produce from 10 to 30 pounds of luscious grapes. The clusters are of immense size, some of the varieties have as many as 150 big clusters the second year planted.

PERENNIALS that FALL

Some perennial plants seldom succeed with spring planting; others (like early spring wildflowers) take spring planting reluctantly—really do far better in fall. On these pages most kinds that ought to be fall planted are listed. (In addition most ordinary perennials will succeed in fall as well as in spring, and may be ordered from our spring 1954 Short Guide.)

MODERN BEARDED IRIS are exciting, bright, clean colors . . . are huge, with often several flowers to a stem. They are nothing at all like old-fashioned German Iris of even twelve or fifteen years ago.
